Don't Just Pay Attention, PLANT It

Transfer L2R Models to Fine-tune Attention in Extreme Multi-Label Text Classification

Debjyoti Saharoy, Javed Aslam

Khoury College of Computer Sciences, Northeastern University

Outline

- Problem
- Shortcomings hitherto...
- Our Method
- Results and Improvements
- Conclusion

Problem: Extreme Multi-Label Text Classification (XMTC)

- Tagging a text with most relevant subset of labels from an extremely large -hundreds of thousands/millions, label set

Connectivity Wireless
Technology

About this item

- Industry-leading noise canceling bluetooth earbuds with the new Integrated Processor V1
- Exceptional sound quality with new Integrated Processor V1 and supporting LDAC codec.
- Crystal-clear call quality, beamforming microphone and a bone-conduction sensor provide clear voice detection even in noisy environments
- Speak-to-chat technology automatically reduces volume during conversations. Note: If you face issue in Bluetooth connectivity please turn off the Bluetooth function for a couple of minutes, then turn it back on
- IPX4 Water resistance

Healthcare (ICD)

Discharge Summary
History of Present Illness: This is a 54-year-old gentleman with a history of deep venous thrombosis and pulmonary embolism in [**2155**], history of hypertension, and atrial fibrillation who presented to the Emergency Department with extreme dyspnea on exertion and weakness.
Major Surgical or Invasive Procedure: Attempt Repair of Ruptured Aortic Aneurysm
Brief Hospital Course: The patient was brought to the cardiac catheterization laboratory and a right heart catheterization revealed a pulmonary artery pressure of 49/17, right ventricular pressure
PERTINENT RADIOLOGY/IMAGING: Electrocardiogram revealed sinus tachycardia with a rate of 120. Intervals were otherwise normal. He had poor R wave progression. No ST changes.
Discharge Diagnosis: 1. Pulmonary embolism; presenting as cardiogenic shock. 2. Atrial fibrillation/atrial flutter. 3. Renal insufficiency.

ICD Codes

37.21: Right Heart Cardiac Catheterization

38.7: Insertion of Intraluminal Device into Superior Vena Cava

88.52: Plain Radiography of Right Heart using High Osmolar Contrast

89.8: Autopsy

99.62: Restoration of Cardiac Rhythm

Problem: Main Challenge in XMTC

1. Datasets consists of texts with multiple lengthy narratives - However, only a small fraction of tokens are most informative with regard to assigning relevant codes
 - MIMIC-III/IV: more than 1500 tokens on average.
2. Code space is extremely high dimensional
 - 18000 and 170000 codes in ICD-9-CM and ICD-10-CM/PCS
3. Code distribution is heavily skewed
 - MIMIC-III: ~5411 out of 8929 codes appear < 10 times

Our Method: **PLANT**

- **P**retrained & **L**everaged **AtteNTion**: novel transfer learning to fine-tune attention in XMTC

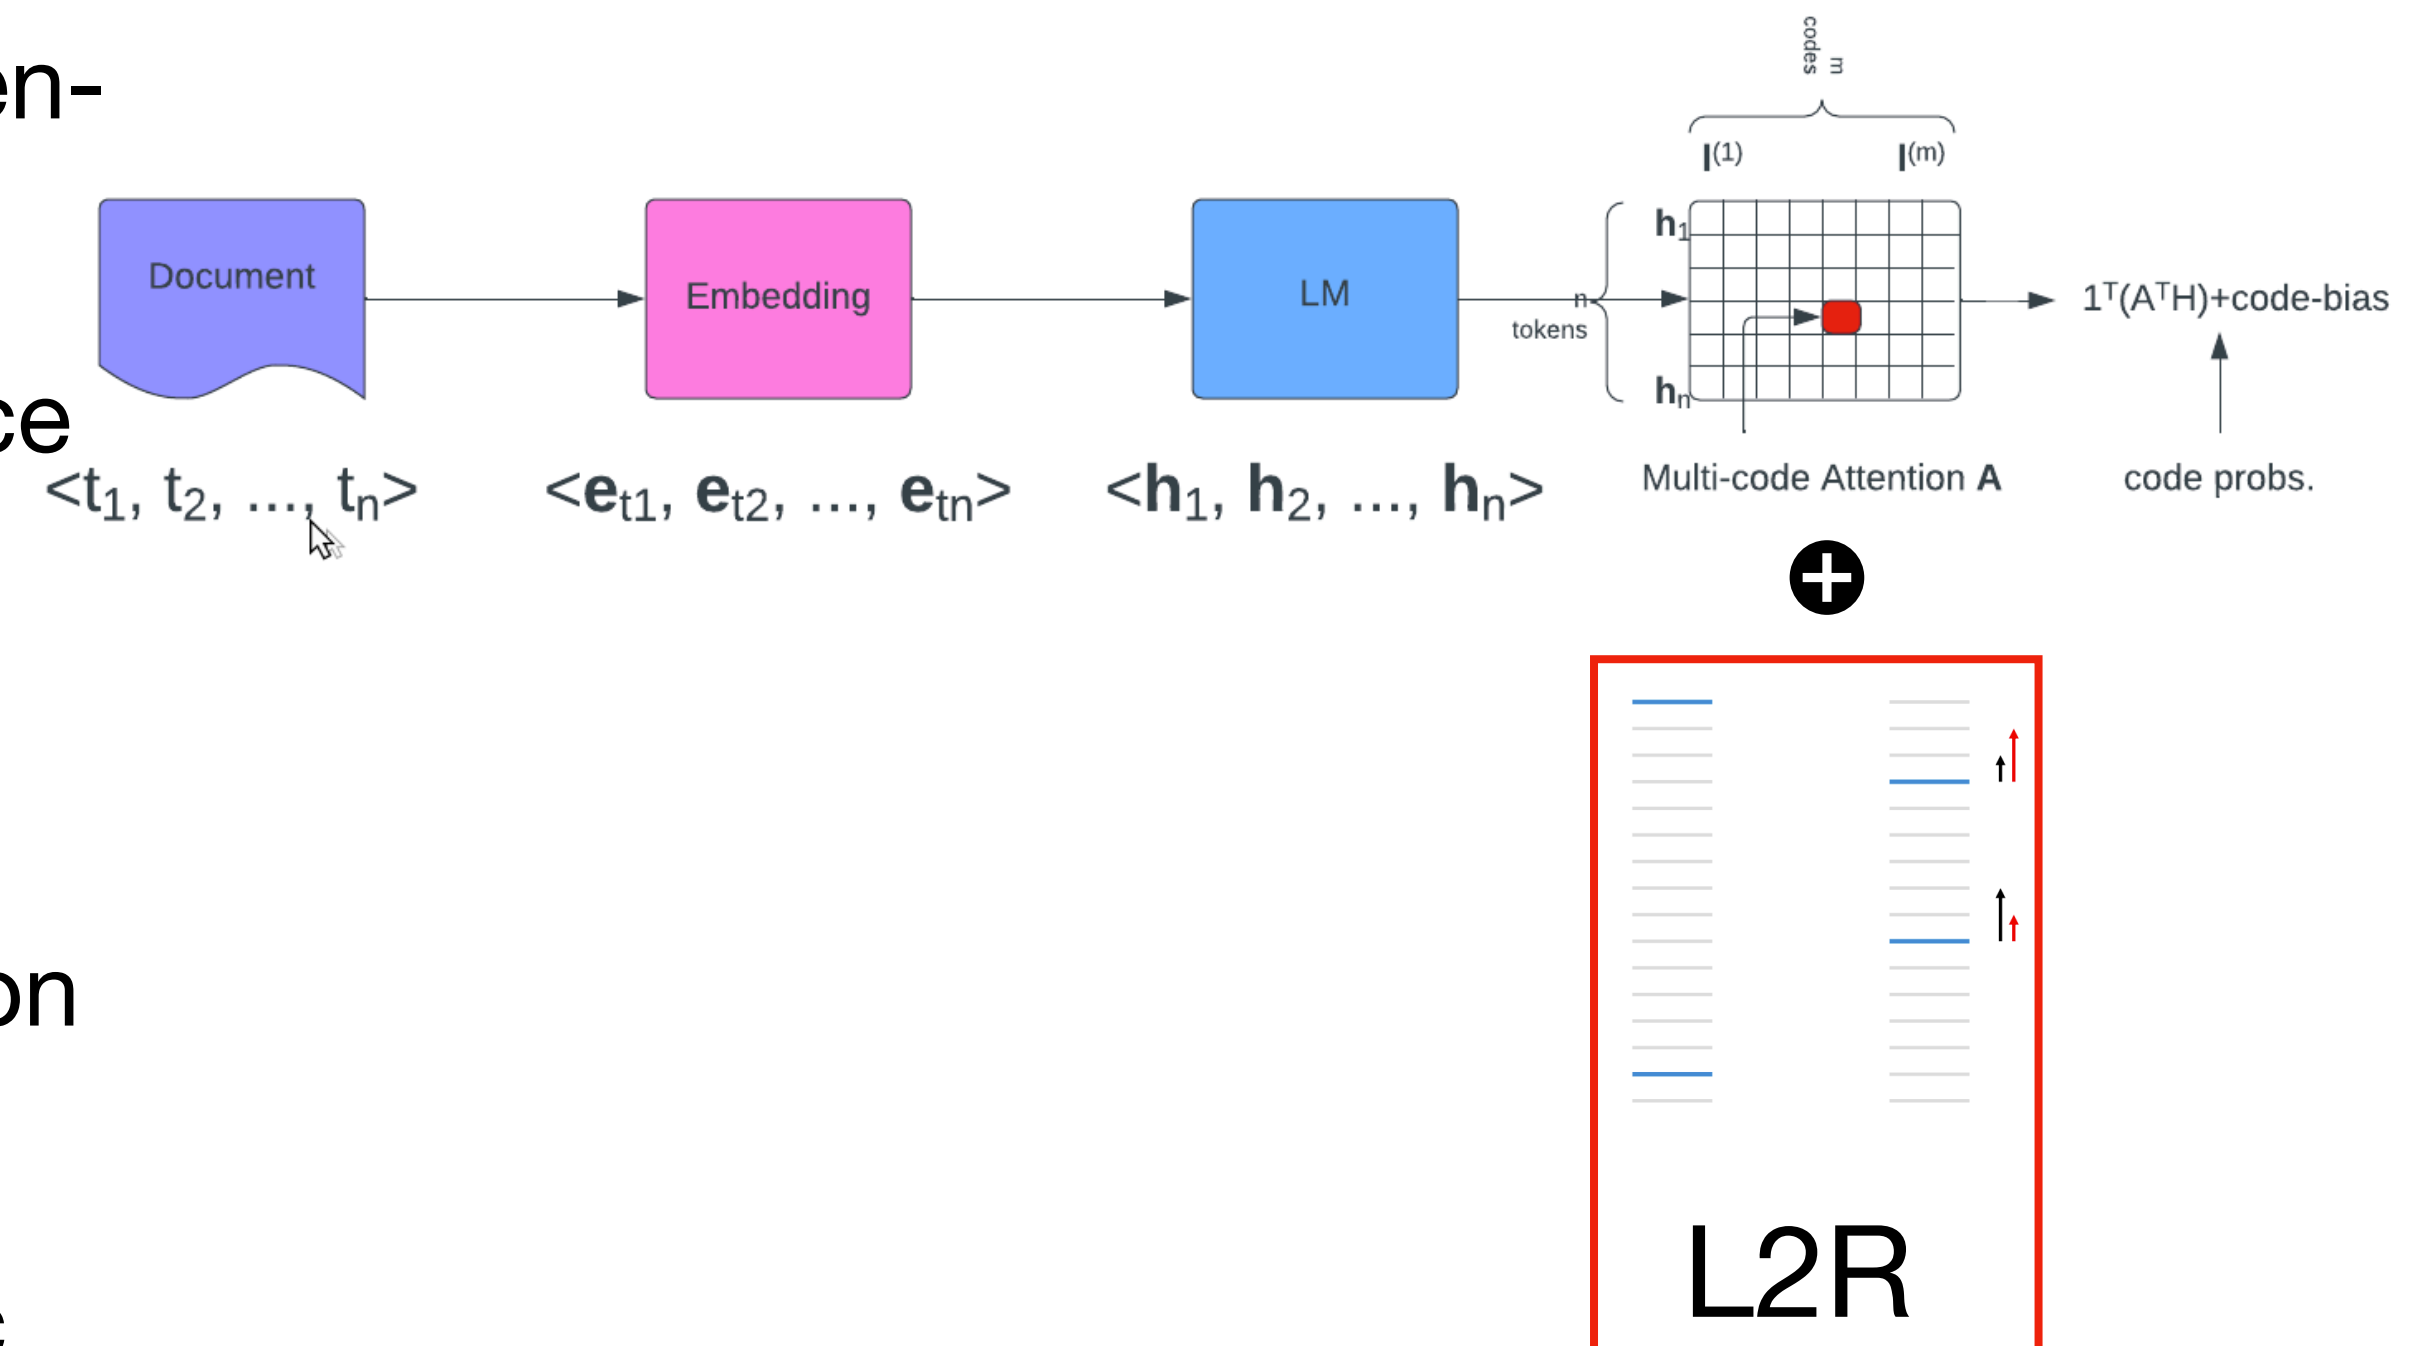

- Capture token-code dynamics: pre-train Learning-to-Rank (L2R) model that ranks token significance by code relevance
- L2R activations as PLANTed attention
- Benefit: Start with well-informed attn wgts rather than random, then fine-tune

Our Method: PLANT

- **P**retrained & **L**everaged **Atte**NTion: capture token-label dynamics with L2R model.
- Goal of L2R: Embed tokens to enhance relevance in sorting by taking dot products with label embeddings.
- Key step 1: Bootstrap “How much can I infer certain code from a token?” -> Mutual-Information Gain
- Key step 2: Max “How good is the code specific token list wrt top k tokens?” -> LambdaRank^[17] / w nDCG @ k

Our Method: Why **PLANT** works?
